

Stronger ■ Better design ■ More versatile ■ Easier to use

### Floating Nut Design

Can't be lost, blue nut is easier to see in the field, user friendly nut design makes handling a breeze, allowing for the nut to be tightened well beyond

### Designed for Superior Strength

The nut teeth bite into the pipe for better grip, this combined with the nuts internal taper which secures the pipe onto the barbs results in superior holding strength.

### Non Threaded Design

With no threads on the nut or the body of the fitting the problem of threads binding up with sand and dirt (particularly sandy and peaty soils) is eliminated.

### Designed for a Wide Range of Pipe and Hose

Works on a range of hoses (wash down, garden etc.) and all Low Density PE Pipe brands
